Education

Sandip University — Nashik, India
Bachelor of Technology in Computer Science — *Aug. 2023 – July 2027*

Experience

Web Developer Intern — August 2026 – Present
Sandip University — *Nashik, India*

- Redesigning the university website and ERP systems using React, Vite, Tailwind CSS, building reusable, data-driven components for the Various section, pages, and internal workflows
- Implemented SEO and GEO (Generative Engine Optimization) improvements, including page-level metadata, structured content, and semantic markup, to improve visibility in search engines and AI-generated answers

Community Lead & Organizer — Mar. 2025 – Present
SECT India — *Nashik, India*

- Scaled a campus tech community to 1,000+ members through recurring events and technical programs
- Organized and managed large-scale technical events, including hackathons with 100+ participants

Projects

Serverless RAG API – Document Q&A | *AWS Bedrock, Lambda, Titan Embeddings, Llama 3.1*

- Built a serverless retrieval-augmented generation (RAG) pipeline for document Q&A using AWS Bedrock
- Implemented embedding generation with Titan Embeddings V2 and LLM inference with Llama 3.1 8B
- Deployed a fully serverless architecture (S3 → Lambda → API Gateway) with secure IAM roles, exposing a RESTful API for scalable, on-demand inference

Drona – Autonomous Drone Mission Framework | *Python, Clean Architecture* — GitHub

- Designed a production-grade modular framework for autonomous drone mission management
- Architected a centralized Mission Manager coordinating planning, docking, and health-monitoring subsystems
- Built hardware-independent abstraction layers (PoseProvider, ActuatorInterface, PathPlanner) enabling integration with external systems (MAVLink, VICON); enforced code quality via Pytest, MyPy, and Ruff in CI

SUN Clubs Website – Registration System | *Supabase, Edge Functions, Cloudflare Turnstile* — Live Website

- Contributed to the SUN Clubs website; independently built the club registration section end-to-end
- Developed a Supabase Edge Function backend to handle registration submissions and validation
- Integrated Cloudflare Turnstile for bot protection on the registration form

CampusCompass – Campus Navigation PWA | *Progressive Web App* — Live Website

- Built and shipped a campus navigation PWA for Sandip University, in active use by students
- Resolved deep scroll and virtual-list rendering performance issues at scale
- Added contextual features (e.g., admissions contact popup with tappable phone links) based on user needs

Technical Skills

Languages: Python, JavaScript, Java, C++
AI/ML: Machine Learning, Large Language Models (LLM), Retrieval-Augmented Generation (RAG), Embeddings, Vector Search, Prompt Engineering, Model Inference
Cloud/Infra: AWS (Lambda, S3, API Gateway, Bedrock, IAM), Serverless Architecture, Docker, CI/CD
Web/Backend: REST API Design, React, Vite, Next.js, Node.js, Tailwind CSS, SEO/GEO
Databases: PostgreSQL, MongoDB, Prisma ORM
Core CS: Data Structures & Algorithms, System Design, Operating Systems, DBMS, Computer Networks
Tools: Git, GitHub, Postman, Pytest, MyPy

Extracurricular

- Co-organized NASA Space Apps Challenge (1,500+ participants) – managed check-ins and networking
- Training & Student Placement Coordinator, Sandip University (May 2025)
- Technical Secretary, Student Council, Sandip University (Sept 2026 – Present)
